SESSION OBJECTIVES

Our educational objectives are to discuss the most recent research in the field of nutrition support. All our topics are knowledge based with the following objectives:

Nutritional Considerations in the Age of GLP1-RAs: What We Know Now, What We Still Need to Define
1. Define the current anti-obesity medication landscape including available medications and mechanisms of action
2. Review current literature regarding weight loss outcomes and effects of medications on body composition and nutritional status
3. Identify areas in need of additional research to optimize nutritional and clinical outcomes in patients taking these medications

Nutrition Intervention Pre and Post Pancreatectomy
1. Understand underlying etiologies for pancreatic resection
2. Recognize nutrition alterations and complications associated with different types of pancreatic surgeries
3. Apply principles of nutrition therapy pre- and post pancreatic surgery, including both exocrine and endocrine challenges

Parenteral Nutrition and End of Life: How to Implement and Manage PN for those on a Hospice Plan of Care
1. Identify the role of parenteral nutrition at the end of life
2. Discuss the challenges associated with integrating customized PN plans into a hospice plan of care
3. Explore possible PN changes when goals of therapy change from life sustaining to maintaining quality at the end of life

BREAKOUT SESSIONS

OBJECTIVES

Clinical Assessment and Management of Common Side Effects of GLP1-RAs: Advice for the Nutrition-Focused Provider

1. Review the most common side effects associated with GLP1-RAs
2. Identify why these side effects may alter dietary intake
3. Discuss practical ways to enhance tolerance and reduce nutritional complications of these medications

Identifying and Managing Exocrine Pancreatic Insufficiency (EPI) in Various Disease States

1. Identify various disease states causing EPI
2. Analyze pancreatic enzyme replacement therapy modalities available for both oral and enteral nutrition patients
3. Construct troubleshooting pathways for pancreatic enzyme replacement therapy in complex patients

A Practical Guide to Teaming with Artificial Intelligence at the Bedside

1. Gain a foundational understanding of how artificial intelligence (AI) systems are developed and trained, including concepts centered on data, model training, and validation
2. Explore real-world applications of AI in existing clinical settings that highlight implementation and patient impact
3. Identify best practices for evaluating new AI solutions developed for clinical environments, including readiness for practice and how they fit into existing workflows
